

# Geography Curriculum Intent

We want to inspire our students to be **curious** about the world, and take a life-long learning approach to Geography. Through teaching powerful and important Geography, we want our students to develop a **deep and holistic geographical knowledge**. We want our students to build and practice **transferable skills** in Geography that they can use in further study or future employment. We understand the power of Geography in highlighting the concepts of **responsible global citizenship** and **sustainability**. We want to **inspire** our students to take a conscientious attitude towards the world and have an understanding of geographical issues on a local, national and global scale.

Curriculum Principles	Curriculum Intent
Curiosity	Our intention is to develop students' curiosity of the world. We want students to ask questions and find answers to key issues that enrich their geographic understanding of the world and it's future challenges.
Deep and Holistic Knowledge	Through enquiry we teach students rich and deep subject content, covering a range of physical, human and environmental areas. We want to teach our students the most important and powerful Geography.
Transferable Skills	Geography is a subject with strong links to other areas of the curriculum such as English, Mathematics and the Sciences. We build students' transferable skills which will benefit them in employment and further study.
Responsible Global Citizens	Through studying a range of contemporary global challenges we allow students to take a responsible attitude towards the world, encouraging them to show stewardship and compassion towards geographic issues.
Sustainability	We understand the power of Geography in teaching students the principles of sustainability. Environmental sustainability is a theme which runs throughout the entire Geography curriculum.
Inspire	Our intention is to inspire future Geographers through teaching an engaging curriculum that includes modern and relevant case studies and media resources. We want students to appreciate the role of Geography in understanding challenges and events that occur in the world around them. We want our students to leave as life-long learners of Geography.
